# ATHENA
## ANALYTICS

### *School X Versus National Leaving Certificate Statistics Silver Report 2017 to 2019*

HL = Higher Level
OL = Ordinary Level

# Overall tables

### Introduction
The purpose of this report is to provide a comparison of your school's Leaving Certificate results with Leaving Certificate results nationwide. This report starts with a series of summary tables and graphs, including all subjects. For each metric, the 2019 comparison is presented first, followed by the year on year comparison. In this section, a description is provided of each of the overall tables.

### CAO points
The first page "Total CAO points 2019" has three graphical objects which present the total CAO points received by students. The first table "Summary Table 2019" provides summary metrics for the CAO points. The first column summarises national results while the second column summarises results from School X. The first row shows the total number of students who sat the Leaving Certificate in 2019 and the total number of Leaving Certificate students in this school. The second row represents median CAO points. The median CAO points is the number of points at the halfway point of all points received, when grades are arranged in order. For example, lets say these are the school's total set of results, listed in order: 200, 341, 345, 402, 625. There are 5 students here, therefore the halfway points (the median) is the third number of points listed, which is 345. The third row shows the average number of CAO points. This is calculated by adding points received by all students together and dividing by the total number of students. This is also known as the mean. The final row shows the highest number of CAO points received.

The second table "Distribution of CAO points" shows how many students in this school received points in each range. For example, the top right hand corner in this table shows the number of students who received between 0 and 50 CAO points in total.

The third figure "Distribution of CAO points" is a histogram showing the distribution of CAO points in 25 point segments.

The next page "Total CAO points year on year" presents the total CAO points received by students in School X over time. The first table shows the total number of students, median CAO points, average CAO points and max CAO points received for the past number of years. The graph underneath this table shows the movement of the median CAO points received, over time. On the right hand side of the page, the distribution of CAO points for the past number of years is presented.

### Participation Rate
The next page "Participation rate 2019 and year on year" shows the participation rate of students in each subject. The "participation rate" refers to the percentage of students who did each subject. The first table shows the number of students doing each subject and also the participation rate in both School X and nationally, in each subject. The second table shows the participation rate in each subject over time.

### Percentage doing Higher Level
The next page "Percentage doing Higher Level 2019" shows the percentage of students doing Higher Level in each subject. The first column shows the percentage doing Higher Level in each subject in School X, the second column shows the same percentage nationally and the third column shows this school's percentage less the national percentage. Therefore if a percentage in the third column is positive it means this schools percentage doing Higher Level in that subject is greater than the corresponding percentage nationwide.

The next page "Percentage doing Higher Level year on year" show the changes in the percentage doing Higher Level of each subject over time.

The first table shows the percentage doing Higher Level in each subject in School X, over time. The second table shows the national percentage doing Higher Level and the third table shows the difference between the two.

## Average CAO points per subject
The table on the next page "Average CAO points per subject Higher Level 2019" shows the average CAO points per subject at Higher Level. The first column shows the average CAO points received nationally in that subject. The second column shows the average CAO points received by students in School X in this subject. The third and final column shows the average number of points received in this school minus points received nationally with the percentage difference in parenthesis.

The table on the next page "Average CAO points per subject Ordinary Level 2019" shows the same information for Ordinary Level.

The next page "Average CAO points per subject Higher Level year on year" shows the movement of average CAO points per subject over time. The first table shows the movement of the average CAO points per subject in School X at Higher Level over time. The second table shows the movement of average CAO points for the same subjects nationally. The third table shows the difference in points between the two, with the percentage difference in brackets.

The next page "Average CAO points per subject Ordinary Level year on year" shows the same information for Ordinary Level results.

## Median Grade
The first table on the next page "Median Grade per subject Higher and Ordinary Level 2019" shows the median grade received in each subject. The median grade is the grade at the halfway point of all grades received, when grades are arranged in order. For example, if 6 students received H2's, 2 students received H4's and 3 students received H5's the median of this set is H2. Here is this set listed out: H2, H2, H2, H2, H2, H2, H4, H4, H5, H5, H5. There are 11 grades here, therefore the halfway grade (the median) is the sixth grade, which is a H2. Note: This set is smaller than any of the samples used in this analysis. It is reduced for the sake of simplicity. If a grade has a ".5" after it, this means that the median is between two grades. For example, if the median grade is "H4.5" that means that the median is between a H4 and a H5. The first column shows the median grade for this school, the second column shows the median grade nationwide and the final column shows the difference between these two. The second table shows the same information, for Ordinary Level.

The next page "Median Grade per subject Higher Level year on year" shows the change in median grade over time at Higher Level. The first table shows the change in the median grade at School X in each subject at Higher Level. The second table shows the change in median grade nationally for the corresponding subjects at Higher Level. The third table shows the difference between the two.

The next page "Median Grade per subject Ordinary Level year on year" shows the same information for Ordinary Level results.

## Percentage of students receiving less than 40%
On the next page "Percentage of students receiving less than 40% Higher and Ordinary Level 2019", the first table shows the percentage of students in this school who received less than 40%. The second column shows the same percentage nationally. The second table shows the same information for Ordinary Level.

The next page "Percentage of students receiving less than 40% Higher Level year on year" shows the change in the percentage receiving less than 40% over time at Higher Level. The first table shows this percentage for students of School X and the second table shows the percentages for the same subjects nationally.

The next page "Percentage of students receiving less than 40% Ordinary Level year on year" shows the same information for results at Ordinary Level.

## Note
If less than 5% of students participated in a subject, results of this subject was not shown in overall tables. If a table represents only Higher or Ordinary Level and less than 2.5% of total students do this level of this subject, these results were not represented in these tables. Results in these subjects were still used in calculating overall CAO points.

## Summary Table
## 2019

|  | **Nationwide** | **School X** |
|---|---|---|
| *Total students* | 56071 | 128 |
| *Median CAO points* | 345 | 316 |
| *Average CAO points* | 335 | 304 |
| *Max CAO points* | 625 | 577 |

# Explanations of Tables and Graphs in following Section (Individual Subjects)

For both Higher and Ordinary Level, there are two pages for each subject. The first page shows statistics based on the 2019 results only. The second two pages show year on year statistics. Again, where less than 2.5% of all students did either Higher or Ordinary Level of a subject, these results were not shown.

**Page 1 2019**

## Distribution of Grades Table

This table shows the percentage of students who received each grade. These percentages are of the total students doing this level of this subject for both groups, i.e. national and this school. The final row shows the number of students in this school who received each grade in this subject, at this level.

## Bar Chart Showing Higher Level Percentage (Higher Level only)

This bar chart has two bars with the first bar showing the percentage of students nationwide (who are doing this subject) doing Higher Level. The second bar shows the same percentage for this school's population.

## Summary Statistics Table

The Summary Statistics Table shows the average CAO points and median grade for both this school and nationwide and also the difference between them.

The median grade is the grade at the halfway point of all grades received, when grades are arranged in order. For example, if 6 students received H2's, 2 students received H4's and 3 students received H5's the median of this set is H2. Here is this set listed out: H2, H2, H2, H2, H2, H2, H4, H4, H5, H5, H5. There are 11 grades here, therefore the halfway grade (the median) is the sixth grade, which is a H2. Note: This set is smaller than any of the samples used in this analysis. It is reduced for the sake of simplicity.

## Distribution of Grades Graph

This graph shows the percentage of students who received each grade in this level of this subject for both this school and nationally. The orange bars represent this school while the blue bars represent the national results.

## Cumulative Distribution of Grades Graph

This graph is a cumulative version of the previous graph. That is, the first point shows the percentage of students who received a H1, the second point shows the percentage of students who received a H1 or a H2 (labeled ">H2"), the third point shows the percentage of students who received a H3 or higher (labeled ">H3") and so on. Again, the orange points represent this school's results while the blue points represent national results.

**Page 2 Year on Year**

## Graphs showing percentages who received H1 or H2 and H4 or better

The graph on the left hand side shows the percentage of students receiving a H1 or a H2 for the past number of years. So, for example, the final

point shows the percentage in 2019 who received a H1 or H2 in your school (red point) and the percentage nationally who received a H1 or H2 (blue point). The second graph shows the percentage of students receiving a H4 or better for the past number of years.

## Summary Statistics

The table on the right hand side of this page presents the summary statistics corresponding with this level of this subject. The first column shows the average CAO points for your school. The second column shows the average CAO points nationally. The third column shows your schools average CAO points less national CAO points. These are highlighted in the same way as the overall tables. That is, if the difference is less than -10% the result will be highlighted in dark red, etc. The fourth column shows the median grade received in this subject at this level for your school. The fifth column shows the median grade received nationally and the final column shows the difference between the two. Again, these differences are highlighted in the same way as the overall tables. For explanations of calculating the average CAO points and the median please see the details in the "Page 1" section under "Summary Statistics Table".

## Percentage doing Higher Level (Higher Level only)

The final table, presented only for Higher Level shows the percentage of students doing Higher Level and how this has changed over time. The first row shows the percentage of students doing Higher Level in your school. The second row shows the percentage of students nationally. The third row shows the difference between these two numbers. These differences are highlighted in the same way as the overall tables. That is. if the difference is less than -10% this will be highlighted in dark red, etc.
